

JPE Replication Report

2026-05-11

1 Paper Identification

ID	20241011
Author	Soltas
Title	Self-Targeting in U.S. Transfer Programs
Iteration	3

Some useful information up front:

- [JPE Data and Code Availability Policy](#)
- [Step by step guidance from Data Editor for Authors](#)
- [Template README](#)

2 Summary

In assessing compliance with our [Data and Code Availability Policy](#), our reproducibility team has identified the following issues, which we ask you to address:

3 General

- ☒ Data Availability and Provenance Statements
 - ☒ Statement about Rights - Part 1: Right to use the data (e.g. *did the authors lawfully obtain the data*)
 - ☒ Statement about Rights - Part 2: Right to publish the data (e.g. *are human subjects involved and did permission been granted to publish their data?*)
 - ☒ License for Data (optional, but recommended)

- ☒ Details on each Data Source
- ☒ Dataset list
- ☒ Computational requirements
 - ☒ Software Requirements
 - ☒ Controlled Randomness (as necessary)
 - ☒ Memory, Runtime, and Storage Requirements
- ☒ Description of programs/code
 - ☐ License for Code (Optional, but recommended)
- ☒ {REPLICATOR} to Replicators
 - ☒ Details (as necessary)
- ☒ List of tables and programs
- ☒ References (Optional, but recommended)

4 High-level Description of Research Project

This research project...

- ☒ uses observational data.
- ☒ uses *confidential* observational data.
- ☐ uses data generated via experiment or trial by the authors (in field or lab).
 - ☐ For lab experiments: The code to implement the experimental protocol (z-Tree, o-Tree etc) is included in the package.
 - ☐ A PDF copy of IRB approval is contained in the package.
 - ☐ A PDF document outlining the design of the experiment, including information on the selection and eligibility of participants is included.
 - ☐ A PDF copy of the instructions given to participants in both original language and an English translation is included.
- ☐ uses data generated via survey by the authors (in field or online)
 - ☐ The programs used to administer the survey (e.g. qualtrics survey file) are included.
 - ☐ A PDF copy of IRB approval is contained in the package.
 - ☐ A PDF of the original questionnaire(s) and information on the selection and eligibility of participants is included.
- ☐ is a simulation study: the data are generated by an algorithm.
- ☐ is a numerical illustration: no data are used but code is used to produce illustrative output (tables, figures)

5 Data description

For any data that cannot be provided as part of the replication package, please provide the following information as part of the README.

{REQUIRED} Please specify how long the data will be preserved in the restricted-access location.

{REQUIRED} Please provide affirmation of support for replication checks. - As per the [JPE policy](#), “In cases where data cannot be published in an openly accessible trusted data repository like the JPE dataverse, authors who have requested an exemption to publish them at the time of first submission must commit to preserving the data and code for a period of no less than five years following the publication of the paper. They should also provide reasonable assistance to requests for clarification and replication.”

{REQUIRED} Please provide a codebook for the data. - The codebook should at a minimum describe the variables obtained from the data source, in a manner that will let others verify that they have obtained a substantially similar dataset if successfully obtaining access to the data.

 - * The relevant commands for each package is downloaded and provided in the `packages` folder.
 - * For `ebayes.ado`, which can be found in the `packages` folder, if the error `ebayes command not found` appears, please try copying the file to your personal `ado` folder. This can be found by the `sysdir` command in Stata.
 - * Python 3.13.7 (code runs a Python script `table_from_tpl.py` via Stata). Only standard library modules required: `os`, `sys`, `optparse`.
- ☒ Computational Requirements specified as follows:
 - The code was last run on a **Intel(R) Xeon(R) Gold 6146 CPU @ 3.20GHz 3.19 GHz (2 processors) with 1.5TB of installed memory (RAM)**.
 - Approximate storage space needed: 2 GB - 25 GB
- ☒ Time Requirements specified as follows:
 - Approximate time needed to reproduce the analyses on a standard 2025 desktop machine: 8-24 hours
- ☒ Requirements are complete.

For missing requirements, see the list of required changes in [Section 9](#)

7 Analyzing Data and Code Files

7.1 Potential Personal Identifiable Information (PII)

We found the following instances of potentially personally identifying information. This may be completely legitimate but might be worth checking. *As a reminder, privacy legislation in many countries (e.g. GDPR in EU) prohibits the dissemination of personal identifiable information without prior (and documented) consent of individuals.* If indeed you want to publish such information with your replication package, you should probably have obtained IRB approval for this - please check!

Summary: - Data files with PII indicators: 290 - Variables flagged in data: 6937 - Code files with PII references: 132 - PII references in code: 8954

7.1.2 File Paths Report

Generated on 2026-05-06T16:18:53.577

Warning: Our search on file path types is imperfect and incurs both type 1 and type 2 errors. We aim to strike a reasonable balance between both. The below table is therefore only indicative. Detailed listings can be found in the appendix to this report.

In this table we analyse all files which contain source code (not data and documentation), and we report the grand total of each type of filepath we encountered.

Please check and replace any **windows** filepaths with unix compliant paths, insofar as this is possible in your setup. (Notice that **STATA** allows / to be a filepath separator on a windows platform, hence this is a requirement for *all* **STATA** applications.)

- ☒ The replication package contains a “main” or “master” file(s) which calls all other auxiliary programs.

NOTE: In-text numbers that reference numbers in tables do not need to be listed.
Only in-text numbers that correspond to no table or figure need to be listed.

7.3 Computing Environment of the Replicator

- Mac Laptop MacBook Air, 1,1 GHz Intel Core i5 4 cores, 8 GB of memory.
- Nuvolos, 16 vCPU, 64 GB of memory, 500 GB of disk space.
- Stata/MP 19.5

8 Replication

- Downloaded code and data from dropbox.
- Uploaded the package to Nuvolos.
- Set up the paths in the code and installed the necessary packages.
- Ran `run_all.do` as per README.

9 Findings

Many of the outputs still show discrepancies. This is very likely due to the fact that, although random seeds have been set in the code now, some/many of the outputs in the paper still correspond to runs of the code before the random seeds were set. Here I report a selection of the outputs for which I found observable discrepancies, but I recommend that the authors check all outputs in the paper to ensure they correspond to runs of the code with random seeds set.

9.5 Other Issues

10 Classification

- ☐ full reproduction
- ☒ full reproduction with minor issues
- ☐ partial reproduction (see above)
- ☐ not able to reproduce most or all of the results (reasons see above)

10.1 Reason for incomplete reproducibility

- ☐ None.
- ☒ **Discrepancy in output** (either figures or numbers in tables or text differ)
- ☐ **Bugs in code** that were fixable by the replicator (but should be fixed in the final deposit)
- ☐ **Code missing**, in particular if it prevented the replicator from completing the reproducibility check
 - ☐ **Data preparation code missing** should be checked if the code missing seems to be data preparation code
- ☐ **Code not functional** is more severe than a simple bug: it prevented the replicator from completing the reproducibility check
- ☐ **Software not available to replicator** may happen for a variety of reasons, but in particular (a) when the software is commercial, and the replicator does not have access to a licensed copy, or (b) the software is open-source, but a specific version required to conduct the reproducibility check is not available.
- ☐ **Insufficient time available to replicator** is applicable when (a) running the code would take weeks or more (b) running the code might take less time if sufficient compute resources were to be brought to bear, but no such resources can be accessed in a timely fashion (c) the replication package is very complex, and following all (manual and scripted) steps would take too long.
- ☐ **Data missing** is marked when data *should* be available, but was erroneously not provided, or is not accessible via the procedures described in the replication package
- ☐ **Data not available** is marked when data requires additional access steps, for instance purchase or application procedure.
- ☐ **Missing README** is marked if there is no README to guide the replicator, or the README is not in compliance with JPE requirements
