

JPE Replication Report

2026-03-16

1 Paper Identification

ID	20241011
Author	Soltas
Title	Self-Targeting in U.S. Transfer Programs
Iteration	1

Some useful information up front:

- [JPE Data and Code Availability Policy](#)
- [Step by step guidance from Data Editor for Authors](#)
- [Template README](#)

2 Summary

In assessing compliance with our [Data and Code Availability Policy](#), our reproducibility team has identified the following issues, which we ask you to address:

3 General

- ☒ Data Availability and Provenance Statements
 - ☒ Statement about Rights - Part 1: Right to use the data (e.g. *did the authors lawfully obtain the data*)
 - ☒ Statement about Rights - Part 2: Right to publish the data (e.g. *are human subjects involved and did permission been granted to publish their data?*)
 - ☒ License for Data (optional, but recommended)

- ☒ Details on each Data Source
- ☒ Dataset list
- ☒ Computational requirements
 - ☒ Software Requirements
 - ☒ Controlled Randomness (as necessary)
 - ☐ Memory, Runtime, and Storage Requirements
- ☒ Description of programs/code
 - ☐ License for Code (Optional, but recommended)
- ☒ {REPLICATOR} to Replicators
 - ☒ Details (as necessary)
- ☒ List of tables and programs
- ☒ References (Optional, but recommended)

4 High-level Description of Research Project

This research project...

- ☒ uses observational data.
- ☒ uses *confidential* observational data.
- ☐ uses data generated via experiment or trial by the authors (in field or lab).
 - ☐ For lab experiments: The code to implement the experimental protocol (z-Tree, o-Tree etc) is included in the package.
 - ☐ A PDF copy of IRB approval is contained in the package.
 - ☐ A PDF document outlining the design of the experiment, including information on the selection and eligibility of participants is included.
 - ☐ A PDF copy of the instructions given to participants in both original language and an English translation is included.
- ☐ uses data generated via survey by the authors (in field or online)
 - ☐ The programs used to administer the survey (e.g. qualtrics survey file) are included.
 - ☐ A PDF copy of IRB approval is contained in the package.
 - ☐ A PDF of the original questionnaire(s) and information on the selection and eligibility of participants is included.
- ☐ is a simulation study: the data are generated by an algorithm.
- ☐ is a numerical illustration: no data are used but code is used to produce illustrative output (tables, figures)

5 Data description

For any data that cannot be provided as part of the replication package, please provide the following information as part of the README.

{REQUIRED} Please specify how long the data will be preserved in the restricted-access location.

{REQUIRED} Please provide affirmation of support for replication checks. - As per the [JPE policy](#), “In cases where data cannot be published in an openly accessible trusted data repository like the JPE dataverse, authors who have requested an exemption to publish them at the time of first submission must commit to preserving the data and code for a period of no less than five years following the publication of the paper. They should also provide reasonable assistance to requests for clarification and replication.”

{REQUIRED} Please provide a codebook for the data. - The codebook should at a minimum describe the variables obtained from the data source, in a manner that will let others verify that they have obtained a substantially similar dataset if successfully obtaining access to the data.

7 Analyzing Data and Code Files

7.1 Potential Personal Identifiable Information (PII)

We found the following instances of potentially personally identifying information. This may be completely legitimate but might be worth checking. *As a reminder, privacy legislation in many countries (e.g. GDPR in EU) prohibits the dissemination of personal identifiable information without prior (and documented) consent of individuals.* If indeed you want to publish such information with your replication package, you should probably have obtained IRB approval for this - please check!

Summary: - Data files with PII indicators: 483 - Variables flagged in data: 15045 - Code files with PII references: 135 - PII references in code: 9052

7.1.2 File Paths Report

Generated on 2026-03-06T16:11:34.428

Warning: Our search on file path types is imperfect and incurs both type 1 and type 2 errors. We aim to strike a reasonable balance between both. The below table is therefore only indicative. Detailed listings can be found in the appendix to this report.

In this table we analyse all files which contain source code (not data and documentation), and we report the grand total of each type of filepath we encountered.

Please check and replace any **windows** filepaths with unix compliant paths, insofar as this is possible in your setup. (Notice that **STATA** allows / to be a filepath separator on a windows platform, hence this is a requirement for *all* **STATA** applications.)

7.2 Code description

There are 4 main do files and 1 Python file.

- Note that the names of outputed tables and figures does not coincide with the numbers in the manuscript, which makes them a bit difficult to identify for comparison in the reproducibility check.

- ☒ The replication package contains a “main” or “master” file(s) which calls all other auxiliary programs.

NOTE: In-text numbers that reference numbers in tables do not need to be listed.
Only in-text numbers that correspond to no table or figure need to be listed.

7.3 Computing Environment of the Replicator

- Mac Laptop MacBook Air, 1,1 GHz Intel Core i5 4 cores, 8 GB of memory.
- Nuvolos, 16 vCPU, 64 GB of memory, 500 GB of disk space.
- Stata/MP 19.5

8 Replication

- Downloaded code and data from dropbox.
- Uploaded the package to Nuvolos.
- Set up the paths in the code.
- Ran `run_all.do` as per README.
- I had to add `cd "../"` at the begining of `run_all.do`, otherwise it won't run.

- I had to `ssc install ftools`.
- I had to `ssc install reghdfe`.
- I had to `ssc install mmerge`.
- I had to `ssc install require`.
- I had to `net install grc1leg`.
- In `prepare_eligsim_liheap.do`, I had to replace lines 32, 37, 42, and 47 as follows:
From:

```
import delimited "$dir/data/eligsim/liheap/liheap_eligibility_*.csv", delimiter(comma) s
```

To:

```
import delimited "$dir/data/eligsim/liheap/LIHEAP_eligibility_*.csv", delimiter(comma) s
```

- When running the loop over the different analysis do files, when it reaches `table_A2.do` I hit this error:

```
file code/settings.do not found
r(601);

end of do-file
r(601);

end of do-file

r(601);
```

This is caused by the previous do file in the loop changing the working directory, which is not then set back to `cd "$dir"`. Adding the latter code in line 24 of `table_A2.do` fixes the problem.

9 Findings

Almost all of the output results show discrepancies with the paper. Even so, all of the results except for Table 3 were produced by the code.

I had to assume that the latest version of the manuscript is `../replication/paper/2-JPE/TransferSelection_`. It's the one that shows the most recent date, but no explicit indication of it is found. It is very important to note that the evaluation presented here is based purely on the comparison between the outputs and that specific version of the paper, so some (even all) of the comments may not be applicable if there is a more recent version. Also, note that the `paper` folder in the

submitted replication package is empty, so perhaps the authors forgot to include the newest version there (which may match with the results much better).

In `replication_tracker.xlsx` Figure 1c should be associated to `eligregs_between_within_lifetime_no.pdf` and from Figure A3 on, the rows should move 1 step down to match their actual output file (i.e., Figure A3 should be associated to `rank_decay.pdf`, Figure A4 to `eligregs_robustness_8_c.pdf`, and so on). Figure A23c as per `replication_tracker.xlsx` should be `eligregs_between_within_lifetime_no.pdf` instead of `eligregs_between_within_lifetime.pdf`. Figure A23c as per `replication_tracker.xlsx` should be `rk_lifetime_eq_pred_income.pdf` instead of `rk_c_eq_pred_income.pdf`.

9.4 In-Text Numbers

{REPLICATOR}: list page and line number of in-text numbers. If ambiguous, cite the surrounding text, i.e., “the rate fell to 52% of all jobs: verified”.

- ☐ In-text numbers not verified.
- ☐ There are no in-text numbers, or all in-text numbers stem from tables and figures.
- ☒ There are in-text numbers, but they are not identified in the code
- Page 14: “In level terms, these results are consistent with differences of approximately 20 to 60 percent in these outcomes, or around \$2,500 to \$10,000 per person per year in consumption”.

9.5 Other Issues

- Some output results do not correspond to any table or figure in the paper.

10 Classification

- ☐ full reproduction
- ☐ full reproduction with minor issues
- ☒ partial reproduction (see above)
- ☐ not able to reproduce most or all of the results (reasons see above)

10.1 Reason for incomplete reproducibility

- ☐ None.
- ☒ **Discrepancy in output** (either figures or numbers in tables or text differ)
- ☒ **Bugs in code** that were fixable by the replicator (but should be fixed in the final deposit)
- ☐ **Code missing**, in particular if it prevented the replicator from completing the reproducibility check
 - ☐ **Data preparation code missing** should be checked if the code missing seems to be data preparation code
- ☐ **Code not functional** is more severe than a simple bug: it prevented the replicator from completing the reproducibility check
- ☐ **Software not available to replicator** may happen for a variety of reasons, but in particular (a) when the software is commercial, and the replicator does not have access to a licensed copy, or (b) the software is open-source, but a specific version required to conduct the reproducibility check is not available.

- ☐ **Insufficient time available to replicator** is applicable when (a) running the code would take weeks or more (b) running the code might take less time if sufficient compute resources were to be brought to bear, but no such resources can be accessed in a timely fashion (c) the replication package is very complex, and following all (manual and scripted) steps would take too long.
- ☐ **Data missing** is marked when data *should* be available, but was erroneously not provided, or is not accessible via the procedures described in the replication package
- ☐ **Data not available** is marked when data requires additional access steps, for instance purchase or application procedure.
- ☐ **Missing README** is marked if there is no README to guide the replicator, or the README is not in compliance with JPE requirements
